About **BDERP**

Revolutionizing blood donation through intelligent technology and real-time coordination

The Challenge

Every year, thousands of lives are lost due to delays in finding compatible blood donors during emergencies. Traditional blood donation systems lack real-time coordination, smart matching algorithms, and efficient communication channels between hospitals and donors. BDERP addresses these critical gaps with cutting-edge technology.

Our Mission

To save lives by creating an intelligent, responsive blood donation ecosystem that connects donors with those in need within minutes, not hours.

Our Vision

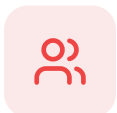

A world where no life is lost due to blood shortage. Where technology bridges the gap between willing donors and urgent medical needs seamlessly.

Our Commitment

We are committed to building a reliable, secure, and user-friendly platform that empowers communities to act swiftly during medical emergencies. Every second counts, and we ensure our technology delivers.

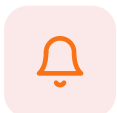

Powerful **Features**

Cutting-edge technology designed to save lives through intelligent coordination

Smart Donor–Hospital Matching

AI-powered algorithm instantly matches compatible donors with hospitals based on blood type, location, and availability.

Real-Time Alerts

Push notifications and SMS alerts ensure donors receive emergency requests immediately on their devices.

Emergency Requests

One-click emergency blood request system with GPS-based donor location tracking for fastest response.

Donor Registration & Tracking

Comprehensive database managing donor profiles, donation history, and eligibility status securely.

Data Security

Bank-level encryption and HIPAA-compliant security measures protecting sensitive medical information.

Awareness Campaigns

Automated community outreach and educational campaigns promoting regular blood donation habits.

Technology Stack

Built on enterprise-grade technologies ensuring reliability, scalability, and security

Frontend

React.js

Modern, responsive user interface with real-time updates

Backend

Node.js + Express

High-performance API server handling concurrent requests

Database

PostgreSQL

Reliable relational database for donor and hospital data

Cloud & Auth

Firebase / AWS

Scalable cloud infrastructure and secure authentication

Mapping

Google Maps API

GIS-based location services for smart donor matching

Security

Encryption

End-to-end encryption protecting sensitive medical data

System Architecture

1

Frontend Layer

React-based responsive UI accessible on web and mobile devices

2

API Layer

RESTful APIs built with Node.js handling business logic and authentication

3

Database Layer

PostgreSQL managing donor profiles, hospital records, and transaction logs

4

Cloud Infrastructure

Firebase/AWS providing hosting, real-time notifications, and scalability

Our Impact

Real-world benefits of intelligent blood donation coordination

Lives Saved

Through faster donor-hospital coordination and reduced response time

Connected Donors

Building a community of willing blood donors ready to help

Response Time

Average time from emergency request to donor notification

Smart Matching

Location-based intelligent donor selection for fastest response

Join Our Life-Saving Community

Every donor registered on BDERP is a potential life-saver. Together, we're building a network of heroes ready to respond when seconds

matter most.
